

# ICT703 – Module 2 Workshop Part 2

## 1. Conversion

For the tasks below make sure you gather the input with explanation and provide the output with explanation.

- a) Write a program that take the input as a string and converts it to a number.
- b) Write a program that takes a number and converts it to a string
- c) Write a program that takes 2 numbers and outputs the sum, difference, product, division, quotient, remainder, exponentiation.

## 2. Banking

Write a program that asks for the user's bank balance and then does 5 transactions (3 deposits and 2 withdrawals) – asking the user each time.

Print out a statement of the account (beginning balance, each transaction with a running balance and the final balance).
