

ICT703 – Module 2 Workshop Part 3

1. Print Formatting

Write a Python program to print the following string in a specific format (see the output).

Sample String : "Twinkle, twinkle, little star, How I wonder what you are! Up above the world so high, Like a diamond in the sky. Twinkle, twinkle, little star, How I wonder what you are" Output :

```
Twinkle, twinkle, little star,  
    How I wonder what you are!  
        Up above the world so high,  
        Like a diamond in the sky.  
Twinkle, twinkle, little star,  
    How I wonder what you are
```

2. Area of a Circle

Write a Python program which accepts the radius of a circle from the user and compute the area.
Go to the editor

Sample Output :

```
r = 1.1  
Area = 3.8013271108436504
```

3. Name Reversed

Write a Python program which accepts the user's first and last name and print them in reverse order with a space between them.

4. Print a list

Write a Python program which accepts a sequence of comma-separated numbers from user and generate a list with those numbers.

ICT703 – Module 2 Workshop Part 3

5. File Extension

Write a Python program to accept a filename from the user and print the extension of that.

Sample filename: abc.java

Output : java

6. Compute $n+n+nnn$

Write a Python program that accepts an integer (n) and computes the value of $n+nn+nnn$.

7. Docstring

Write a Python program to print the documents (syntax, description etc.) of Python built-in function(s).
