

7.4 Read about functions in Python

Read

Read the following article to learn gain more insights using functions in Python.

- [Chapter 6](#) 
(<https://runestone.academy/ns/books/published/thinkcspy/Functions/toctree.html>) of the textbook (Runestone Academy, n.d.)

As you read, consider the following question and make notes in your journal.

- What is the difference between a parameter and an argument?

Check your understanding by completing this [quiz](#) 

(<https://runestone.academy/ns/books/published/thinkcspy/Functions/functions.html>) in chapter 6 of the textbook (Runestone Academy, n.d.).

Certification: Domain 2

This week you should focus your attention on Domain 2. Remember, all Certification course resources are available through GMetrix which you can access via the link in the left-side menu.

Start working on Domain 2 now.

If you have any questions or would like to cover any points, please bring them to the workshop for discussion.

Activity: Flow control

Drag the statements into the correct row in the table below.

Conditional statements

Transfer statements

Iterative statements

if-elif-else

✔ Submit

□ Reflect

Reflect on the syntax for function definitions — using the `def` keyword, indentation, documentation, return values and so on — and write notes on the following in your journal.

- Think of examples where you might return nothing, one value or many values.
- Start building your own function template that will make it easy to create new functions.
- Think about how you would use functions for Task 2.
