Goal

To produce a Python program that effectively solves a real-world problem.

Type	Individual
Due date and time	Week 9, 18 Sep 2026, 11:59 PM
Format/Product	Submit two files via Canvas: 1. Report (Word document) Filename: <StudentName> - Task 2.docx 2. Python Program (ZIP archive) Filename: <StudentName> - Task 2.zip. The ZIP file should include all required Python source files, test program, data files, configuration files (if applicable), and any supporting resources required to run the program. Use relative file paths so the program can be executed after extraction without modification.

Please refer to the ICT703 Task 2 – Task Description and Requirements PDF for the complete assessment specification, including the task overview, functional requirements, advanced features, report and submission requirements, AI use guidelines, and other important instructions. Ensure you read the document carefully before commencing the assessment.

Task Description and Requirements [ICT703-Task2-TaskDescriptionandRequirements.pdf](#)

<https://learn.usc.edu.au/courses/35243/files/3321799?wrap=1>

Resources

Your code should follow the [PEP 8 – the Style Guide for Python Code \(https://pep8.org/\)](https://pep8.org/) for comments, naming, and general style.

Review the material on test plan creation.

Sample Report Structure - [ICT703Task 2-Template-1.docx](#)

□ AI-Supported Learning Statement

This task permits the responsible and ethical use of artificial intelligence (AI) tools to support your learning and completion of some aspects of this task.

The work you submit for this task must remain your own.

This means:

- The ideas, arguments, and final responses you submit must be your own work.
- Your submission must reflect your understanding, voice and learning.
- You are responsible for checking the accuracy, relevance, and ethics of any AI-assisted content you use.
- You must acknowledge the use of AI in your submission.

Please refer to the [Artificial Intelligence for Students Guide \(https://libguides.usc.edu.au/ai-students\)](https://libguides.usc.edu.au/ai-students) for guidance on how to use AI responsibly and how to [acknowledge your use of AI \(https://libguides.usc.edu.au/ai-studentguide/responsible#s-lg-box-23112449\)](https://libguides.usc.edu.au/ai-studentguide/responsible#s-lg-box-23112449).

While you may use AI as outlined in the assessment instructions, you must ensure that the authorship of the work remains your own. Do not hand over (transfer) or give up (relinquish) authorship, and do not falsify or fabricate any content or supporting documents.

ICT703 2026 Trimester 2 Task 2 Rubric

Criteria	Ratings					Pts
	8 to >6.7 pts High Distinction (HD)	6.7 to >6 pts Distinction (D)	6 to >5.1 pts Credit (C)	5.1 to >3.9 pts Pass	3.9 to >0 pts Fail (F)	/ 8 pts
1. Report and Documentation	Professional, well structured, concise, and comprehensive report. All required sections are completed with clear explanations. Appropriate pseudocode, flowcharts, tables, screenshots, or diagrams are included where relevant. Testing, advanced features, challenges, and AI use are	Well-organised and complete report. All major sections are addressed with clear explanations and appropriate supporting evidence. Minor omissions or weaknesses may be present.	Most required sections are included and adequately explained. The report communicates the solution effectively, although some discussion lacks depth, clarity, or supporting evidence.	Basic report demonstrates satisfactory understanding. Several required sections are incomplete, unclear, or lack sufficient detail. Limited supporting evidence is provided.	Report is poorly organised, unclear, or missing major required sections. Limited understanding of the program and assessment requirements is demonstrated.	

ICT703 2026 Trimester 2 Task 2 Rubric

Criteria	Ratings					Pts
	critically discussed and clearly documented.					
	10 to >8.4 pts High Distinction (HD) Correctly reads text or CSV files and processes records in order. Missing empty, and unreadable files are handled robustly. All required core validation checks are correctly applied, invalid records are excluded with clear reasons, and valid records are stored effectively using suitable Python data structures.	8.4 to >7.4 pts Distinction (D) Nearly all reading, validation, error-handling, and storage requirements are correctly implemented. Minor errors or omissions do not significantly affect the program.	7.4 to >6.4 pts Credit (C) Most requirements are implemented correctly. Some validation, file-handling, or storage requirements contain minor errors or omissions.	6.4 to >4.9 pts Pass (P) Basic file reading, validation, and storage are evident, but several requirements are incomplete, unreliable, or incorrectly implemented.	4.9 to >0 pts Fail (F) Major file-reading, validation, or storage requirements are missing or incorrect. The program cannot reliably process the transaction data.	
2. Read, Validate and Store Transactions — Core Features						/ 10 pts
3. Core Fraud Detection and Output	12 to >10.1 pts High Distinction (HD) All required fraud-detection rules are correctly implemented: high-value approved transactions, repeated declined transactions, and transactions from multiple	10.1 to >8.9 pts Distinction (D) All fraud-detection rules operate correctly with only minor logical, formatting, or presentation issues.	8.9 to >7.7 pts Credit (C) Most fraud-detection rules operate correctly. Minor logical errors, omissions, or unclear output are present.	7.7 to >5.9 pts Pass (P) Basic fraud detection is implemented, but one or more rules are incomplete, unreliable, or incorrectly presented.	5.9 to >0 pts Fail (F) Major fraud-detection functionality is missing or incorrect. Suspicious activity is not reliably identified or displayed.	/ 12 pts

Criteria	Ratings					Pts
	locations. Suspicious transactions and accounts are accurately identified and clearly displayed with all required details and explanations.					
	10 to >7.9 pts High Distinction (HD) Advanced features are fully integrated with the core program, and clearly explained in the report and code documentation. The features are complete, correct, functional, and substantially extend the core program. The implementation demonstrates strong technical capability and problem-solving. All supporting files and dependencies are provided.	7.9 to >6.6 pts Distinction (D) Advanced features are well integrated and appropriately documented. The features are correct, functional, and provide a clear extension beyond the core requirements. Only minor issues or omissions are present.	6.6 to >5.9 pts Credit (C) Advanced features are generally integrated, or multiple advanced features are partially implemented. Some limitations in correctness, completeness, or robustness are evident. Documentation lacks some detail, completeness, or consistency.	5.9 to >3.3 pts Pass (P) A limited attempt is made to implement advanced functionality. Features are incomplete, only partially functional, or demonstrate limited complexity. Documentation of advanced features is minimal, incomplete, or unclear.	3.3 to >0 pts Fail (F) No meaningful advanced functionality is implemented, or attempted features do not operate successfully. Little or no evidence is provided that advanced features have been integrated or documented.	
4. Advanced Features						/ 10 pts
	8 to >7.2 pts High Distinction (HD) A comprehensive and automated test.py is provided and	7.2 to >6.7 pts Distinction (D) Most required functionality is appropriately tested with only minor omissions. Tests are well	6.7 to >6.2 pts Credit (C) Most core functionality is tested, but some required scenarios, invalid inputs, or boundary	6.2 to >5.4 pts Pass (P) Basic automated testing demonstrates that some main functionality	5.4 to >0 pts Fail (F) Little or no meaningful automated testing is provided. Tests are incomplete,	/ 8 pts
5. Testing and Validation (test.py)

Criteria	Ratings					Pts
	runs without manual input. Tests cover all required core and advanced functionality using valid, invalid, normal, suspicious, and boundary cases. Expected and actual results and Pass/Fail outcomes are clear and repeatable.	organised, automated, and clearly documented.	conditions are missing or insufficiently documented.	works, but coverage is limited or test evidence is unclear.	incorrect, require substantial manual input, or do not demonstrate program correctness.	
	2 to >1.7 pts High Distinction (HD) Code is modular, readable, maintainable, and easy to extend. Functions are reusable and well structured. Appropriate data structures, parameters, return values, naming conventions, comments or docstrings, formatting, relative file paths, and error handling are consistently applied. Code duplication is minimised.	1.7 to >1.5 pts Distinction (D) Code is well organised and demonstrates good programming practices, modularity, readability, and documentation. Only minor improvements are required.	1.5 to >1.3 pts Credit (C) Code is generally organised and readable with reasonable use of functions and data structures. Some duplication, inconsistent formatting, or limited documentation is evident.	1.3 to >1 pts Pass (P) Basic programming practices are demonstrated, but improvements are required in modularity, readability, naming, documentation, error handling, or maintainability.	1 to >0 pts Fail (F) Code is poorly organised, difficult to follow, excessively duplicated, inadequately documented, or demonstrates inappropriate use of functions and data structures.	/ 2 pts
6. Programming and Code Quality
