

Task 3 Examination

Goal

The final task requires you to demonstrate skills in the Python programming language. This is an external exam that also provides an industry certification if you achieve the required mark. This will provide you with a useful skillset for your current and future professional roles.

Format/Product	Examination — not centrally scheduled
Type	Individual
Weighting	25%
Length	60 minutes
Course learning outcomes (CLOs) assessed in this task	1, 2, 3
Due date	Friday of Week 12, 16 October 2026 at 4.00 pm - During scheduled workshop times

Assured Learning Statement

This task is an assured learning assessment. It has specific requirements for verifying your authorship of the work and the conditions under which you completed the task.

This means:

- You must ensure that the authorship of the work remains your own.
- You must not hand over (transfer) or give up (relinquish) authorship.
- You must not falsify or fabricate any content or supporting documents.
- You must only use artificial intelligence (AI) where the Course Coordinator has specified in the task instructions, demonstrating relevant professional or disciplinary learning.
- If instructed to use artificial intelligence, you must follow the assessment instructions provided.

Any departure from the above requirements may lead to the misrepresentation of your achievement of the stated learning outcomes. If your authorship cannot be verified, penalties outlined in the [Student Misconduct Procedures](#)

(<https://www.unisc.edu.au/about/policies-and-procedures/student-misconduct-procedures>) (Section 5) may apply.

Assignment is **not** eligible for 48-hour automatic assignment extension request

- Due to the nature of this assessment task, the due date is fixed.
- Any request for an extension must be submitted via the standard extension or special consideration process, and provision of appropriate supporting documentation is required.
- For all centrally scheduled examinations, you must apply for a deferred examination: [Deferred Examinations – Procedure](https://www.unisc.edu.au/about/policies-and-procedures/deferred-examinations-procedures) 
(<https://www.unisc.edu.au/about/policies-and-procedures/deferred-examinations-procedures>).

Assessment criteria

This assessment will measure your ability to understand the Python programming language under the following domains:

- operations using data types and operators
- flow control with decisions and loops
- input and output operations
- code documentation and structure
- troubleshooting and error handling
- operations using modules and tools.

As this exam is scored all criteria are measured in the overall score.

Task Instructions

This exam will have 30 questions comprising both multiple choice or fill in the blank (from a drop down), as per the practice exams provided in workshops 10 and 11.

The duration of the exam will be 50 minutes. (This excludes identity verification and other administrative tasks.)

The pass mark for the industry certification is 70%; however, your result will also contribute 25% to your overall grade in ICT703.

You will complete the exam online in your regular workshop time.

Resource

Refer to the practice exam questions in workshops 10 and 11.

Submission format

This is an online invigilated exam hosted using proctored exam software and UniSC invigilators.

This exam is *open book*, though you should study for it like it is closed book due to the time constraint.

If you are an online student, you will be required to verify your identity on Zoom at the commencement of the session. You must have a web-camera to verify your identity, and IP logging will be enabled in the exam portal.
